

WEBINAR

Improving efficiency through automation and networking

THERMAL SYSTEMS

October 23, 2025 at 9.00 a.m. and 4.00 p.m.

The topic of automation has already made its way into many markets, with not only the increasing shortage of skilled workers driving companies in this direction but also the continuously growing demands of end customers regarding traceability. Automated workflows are therefore indispensable in the electronics industry, and the networking of production lines is progressing rapidly.

In our webinar, we aim to provide you with insights into the diverse solution approaches of coating lines and their benefits for the user. Furthermore, we would like to introduce you to the software modules of our Rehm subsidiary RESITCO for communication and control of lines, with which you are able to control your production even more flexibly and autonomously. Our goal is to work together with you to find the ideal solution for your requirements and to realize it as a general contractor, together with our longstanding partners.

Our experts will be available for questions and suggestions after the webinar.

Main topics of the webinar

- Current Trends and Developments:
- Increasing level of automation
- Flexible manufacturing/production
- Reliability; repeatability
- Variant management
- Traceability
- Process control and monitoring
- Monitoring
- Preventive maintenance
- Rehm as a partner for turnkey solutions

October 23, 2025 at 9:00 a.m. CEST (for Asia, Europe, ROW)

October 23, 2025 at 4:00 p.m. CEST (for Americas, Europe)

Duration of the Webinars: 60 Min.
