

WEBINAR

Reflow soldering in energy crisis

THERMAL SYSTEMS

January 26, 2023 at 9.00 a.m. and 4.00 p.m.

Soft soldering with convection has been used for decades as a robust and cost-effective joining process for the manufacture of electronic assemblies.

This process has been continuously shaped by various requirements. These include, among others, the lead-free solders, throughput optimization and sustainability.

The current situation regarding the availability of resources such as electrical energy and nitrogen poses new goals and challenges for both the equipment technology and the process definition of brazing.

In this webinar our speakers will present the plant and process specific possibilities to reduce these resource consumptions and will be happy to answer your questions.

Main topics of the webinar:

- **Process-related topics:**
Aspects of profiling with regard to the resource consumption
- **Plant-related topics:**
Optimized plant technology to save media consumption

January 26, 2023 at 9:00 a.m. CET (for Asia, Europe, ROW)

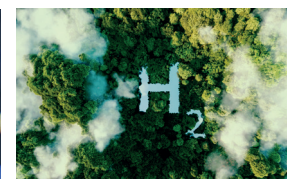

January 26, 2023 at 4:00 p.m. CET (for Americas, Europe)
